Engineered with the needs of medical and emergency front-liners in mind, the **Airlock™ AV100 Anti-Viral Respirator** offers the highest available protection against viruses and bacteria, while providing comfort and breathability, even with prolonged use.

Each **Airlock™ AV100 Anti-Viral Respirator** is equipped with two layers of **Airlock™ Anti-Pathogen Purification Element**, a meso-graphene polymer composite material which continuously captures and deactivates >99.99926%* of viruses and other airborne pathogens; making it the only respirator that protects to the limits of detection.

Made with medical grade silicone rubber and with up to 3-times the air flow compared to other masks, the Airlock AV100 offers unparalleled comfort and protection.

**Independent third-party testing on our air purification technology has proven that our masks remove greater than 99.99926% of all biological and virological contaminants to the limits of detection.*

NEXT GENERATION TECHNOLOGY

Airlock389's proprietary active anti-viral graphene-based technology perpetually captures pathogens through adsorption, deactivating airborne microorganisms and viral particulates with an electrostatic charge.

CHANNEL	UNIT PRICE
Suggested Retail	\$136.00*
Beta Unit AV100B-C AV100B-N	\$111.52**

*One purification element included with Beta unit.
